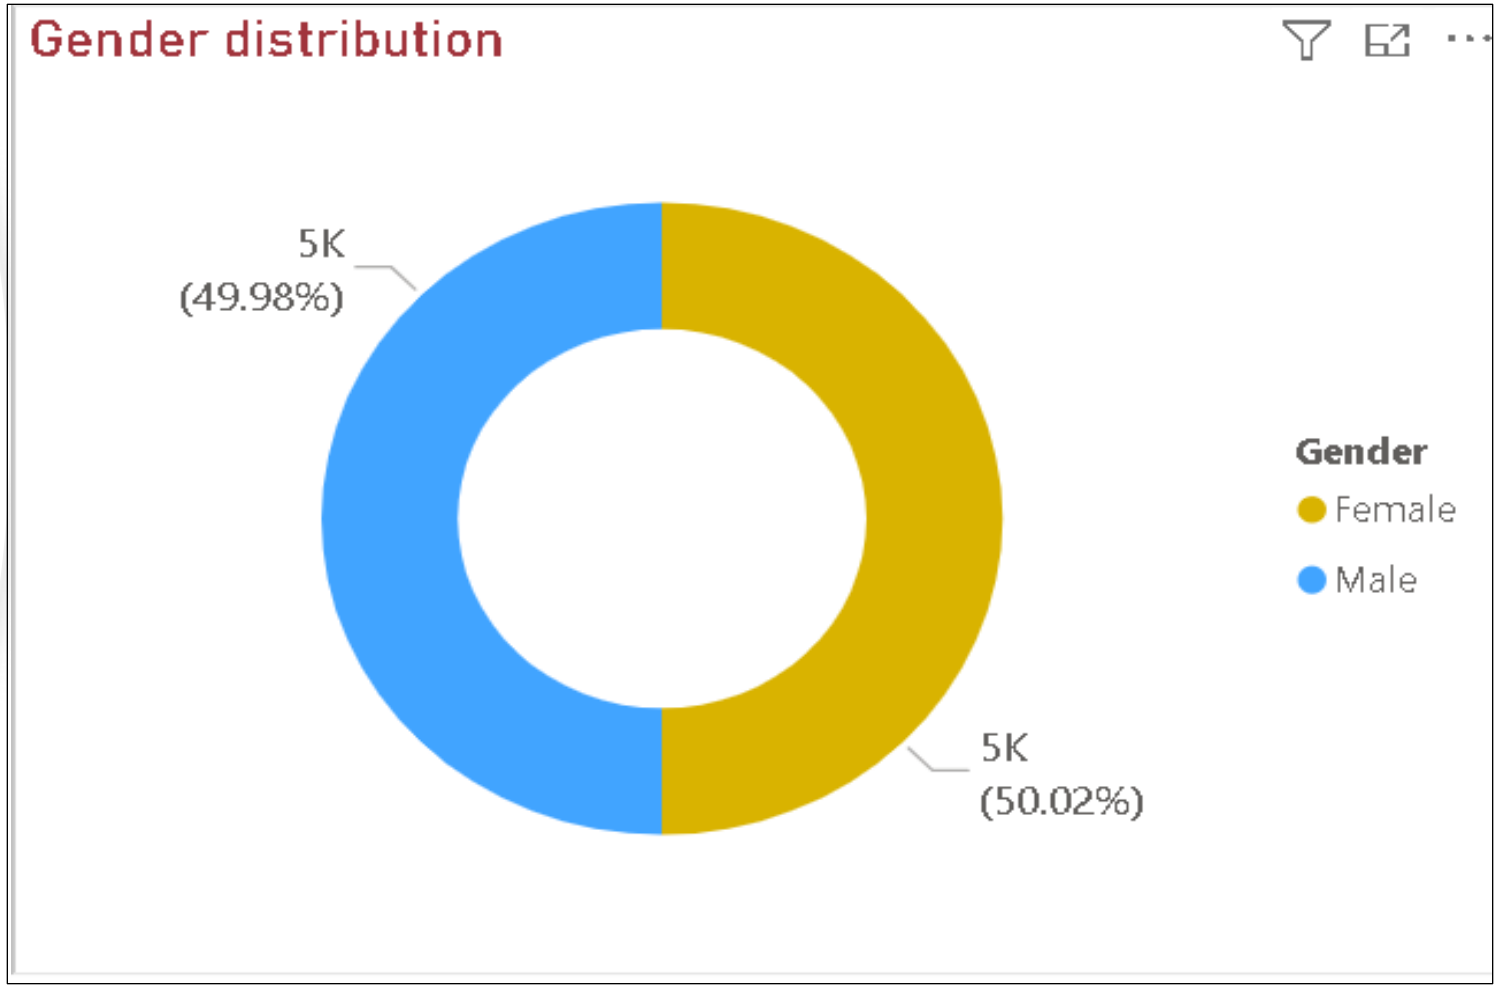
4. Client Lifecycle / Registration Trends
5. Strategic Recommendations (Summary)
6. Conclusion and Next Steps

1.Overview of Client Demographics

Gender Distribution

➤ Gender distribution is balanced (**50/50**), indicating no need for gender-specific acquisition strategies.

➤ Future marketing efforts should **prioritize behavioral** and **regional segmentation,** where stronger performance differences are likely.

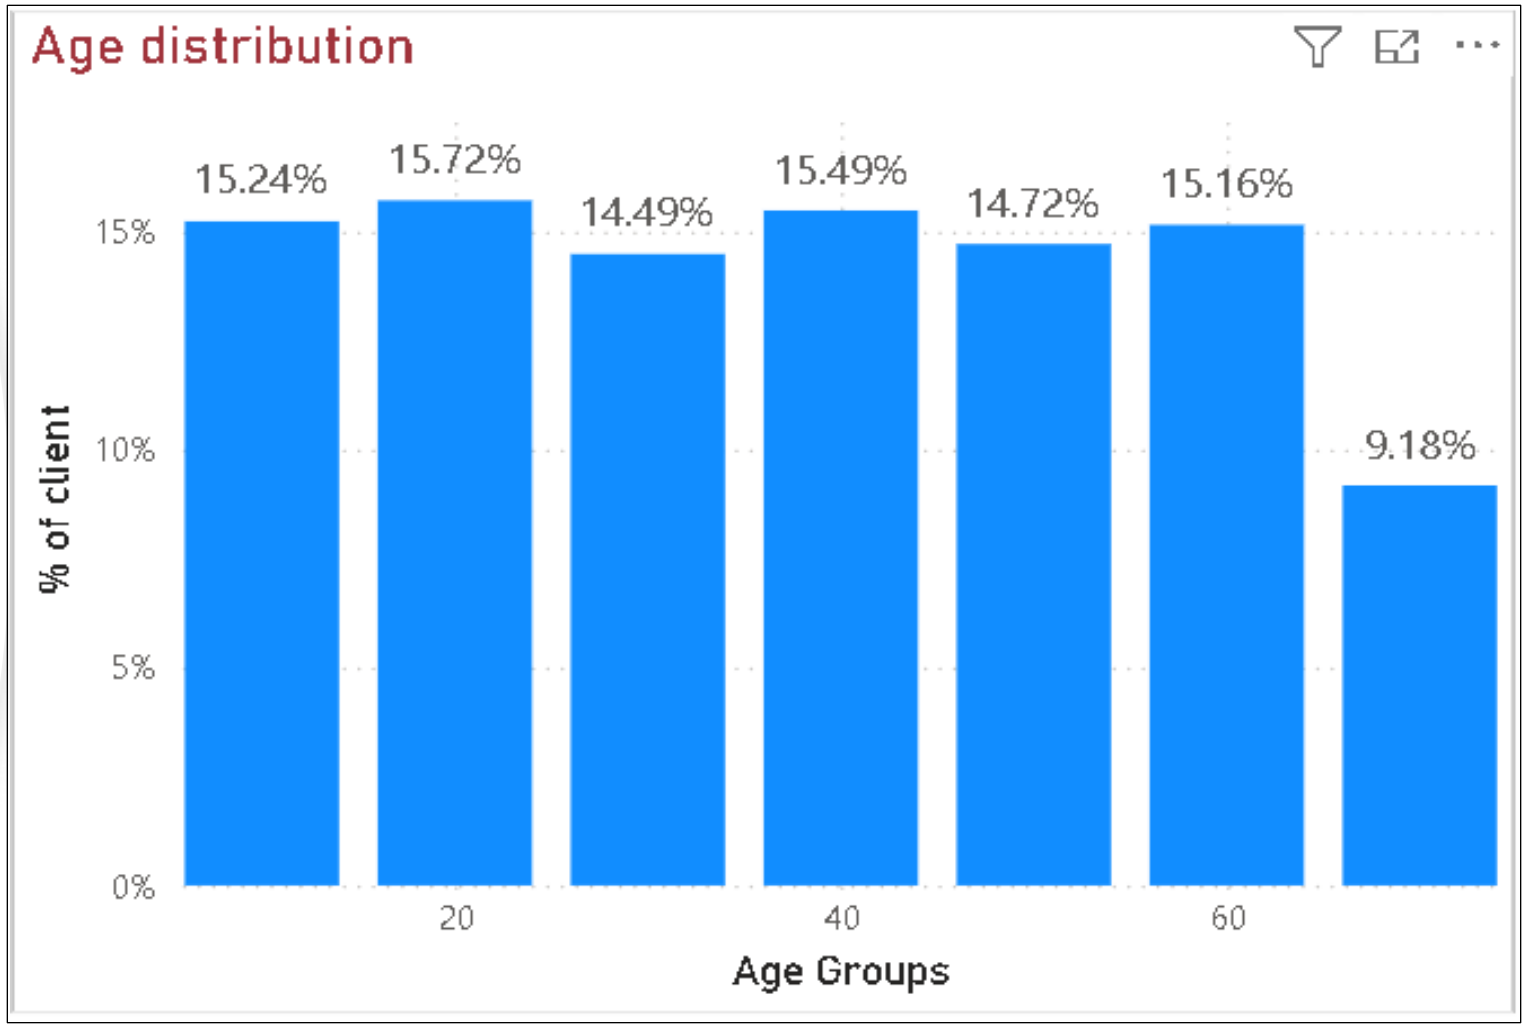


Age Distribution of Clients

➤ **Age groups** between **10 to 60 years old** each represents **around 15%** of clients.

➤ The **70+** age group drops to **9.18%.**

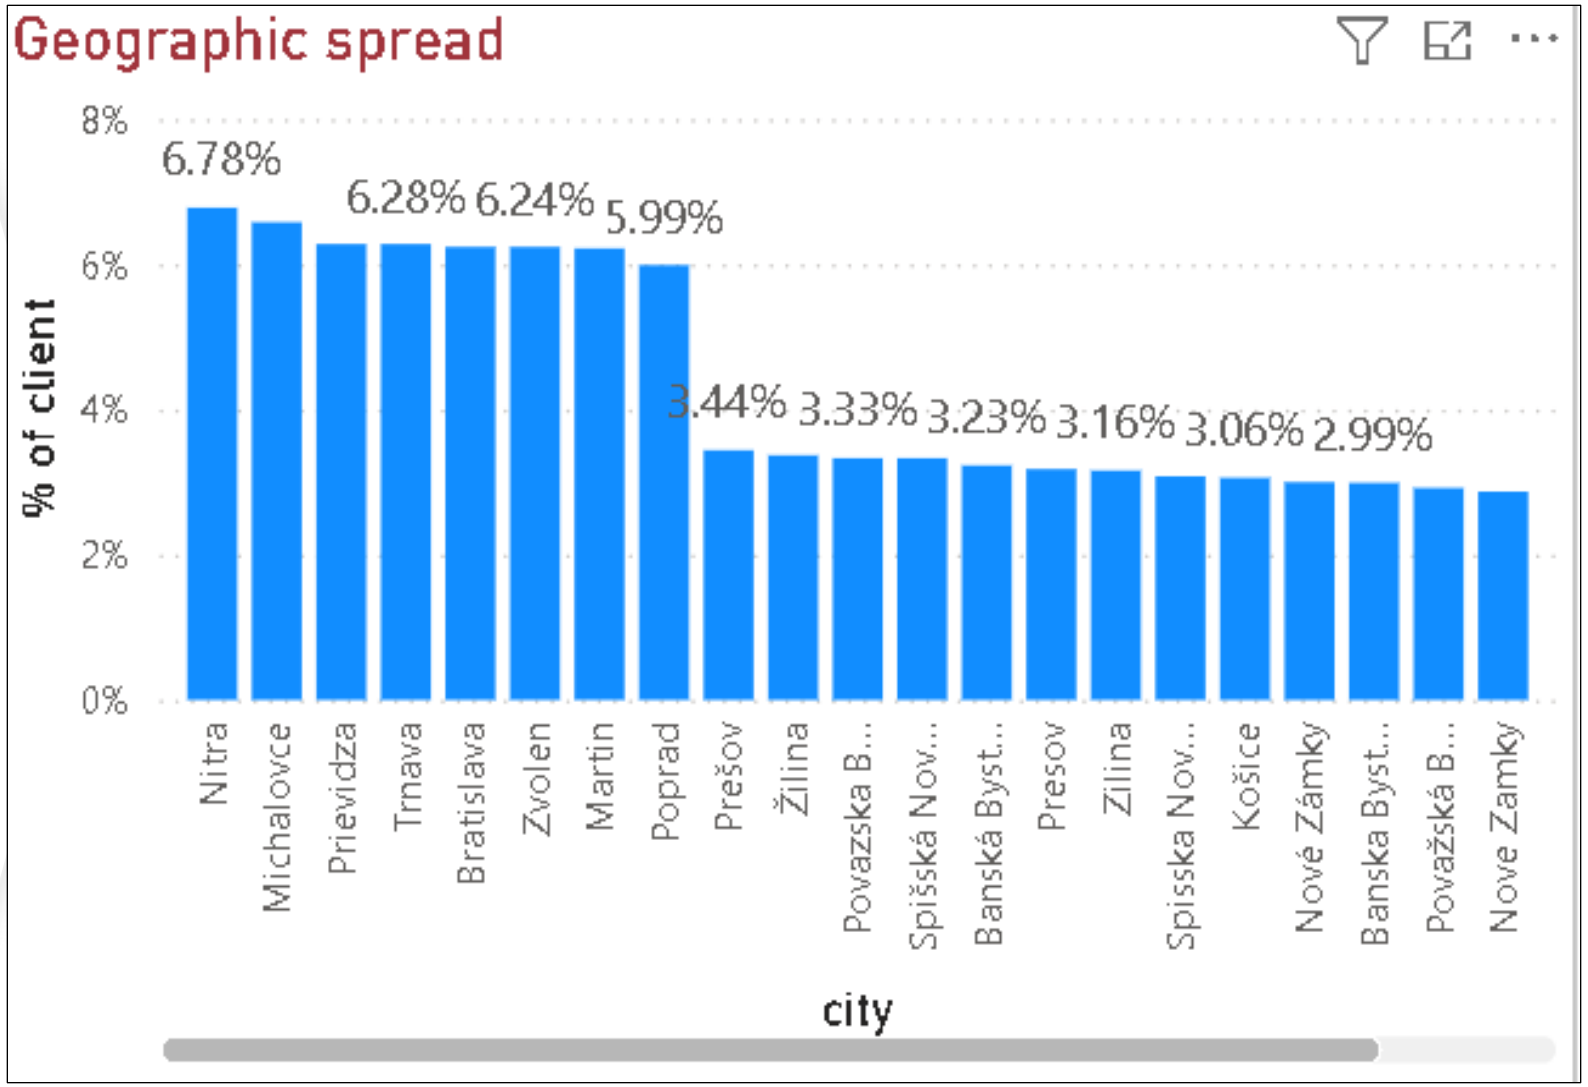
➤ This allows for **age-targeted marketing**, except for **70+**, which has a smaller share.



Geographical Distribution

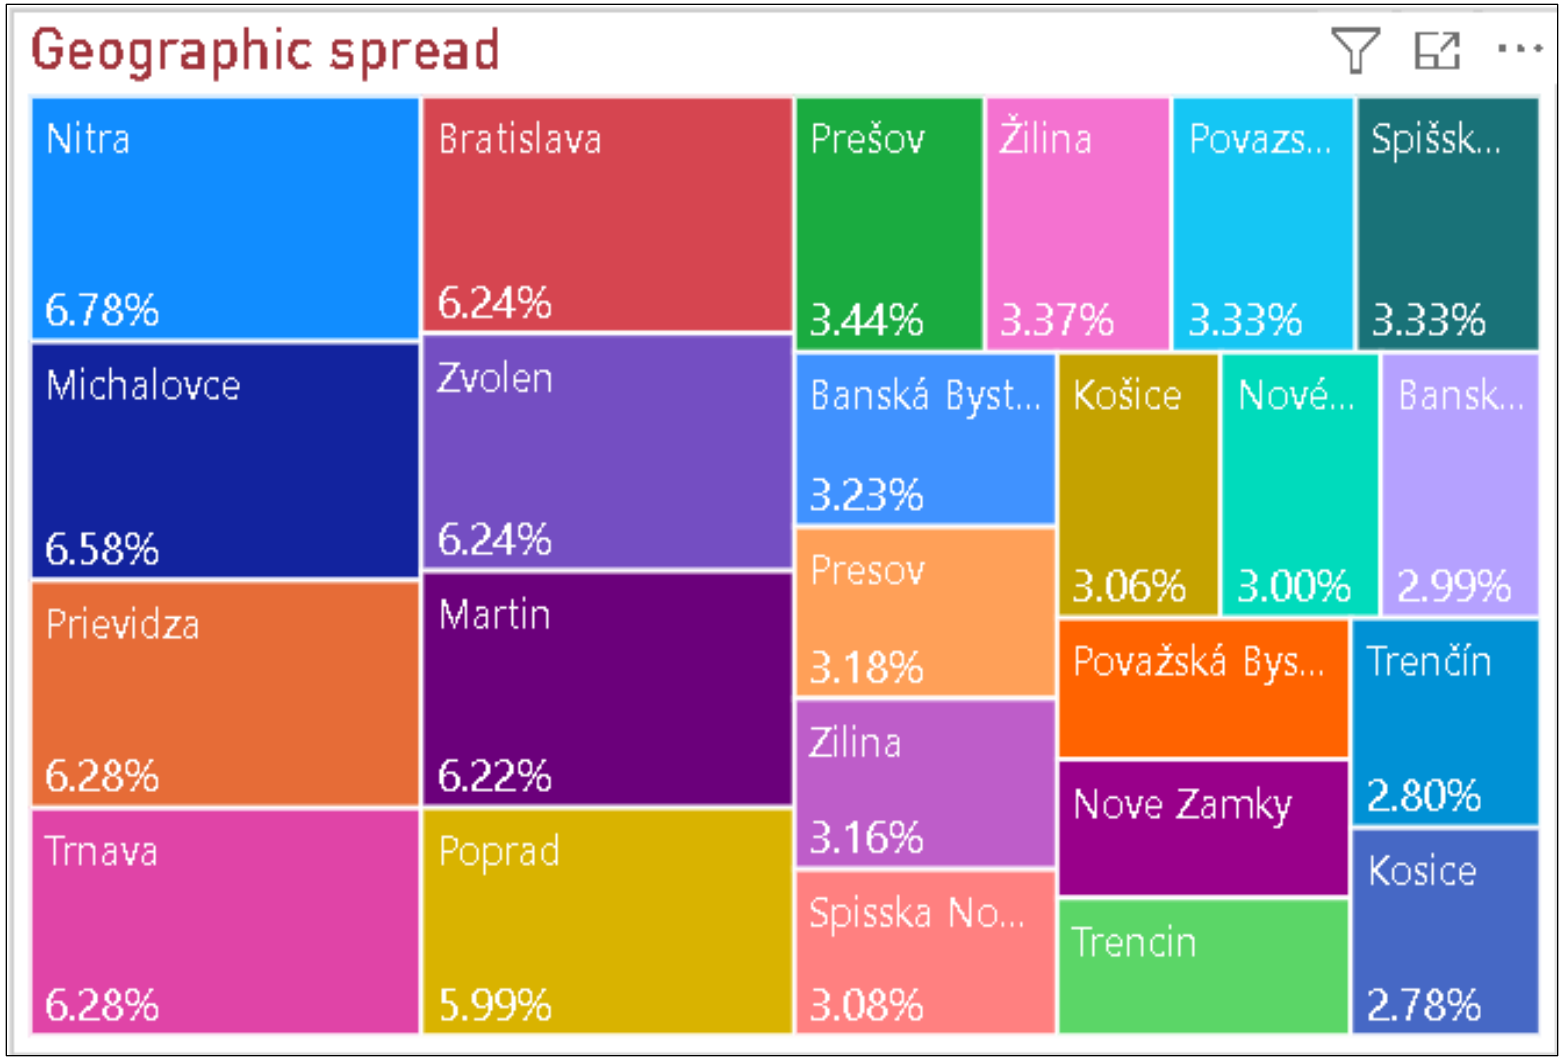
➤ Most clients come from **Nitra through Poprad.** These cities make up about **50%** of the client base.

➤Other cities have less than **3.5%.**



Geographical Distribution

➤ Cities like **Trenčín** and **Košice** have **only 3%**, showing potential for **targeted local campaigns** or expansion.



Strategic Recommendations (Demographics)

Targeted campaigns – Customize offers by age group and regions with high representation.

Youth offers – Encourage engagement with mobile services, referral bonuses, or student accounts.

Regional expansion – Explore low-penetration areas via branches, local ads, or partnerships.

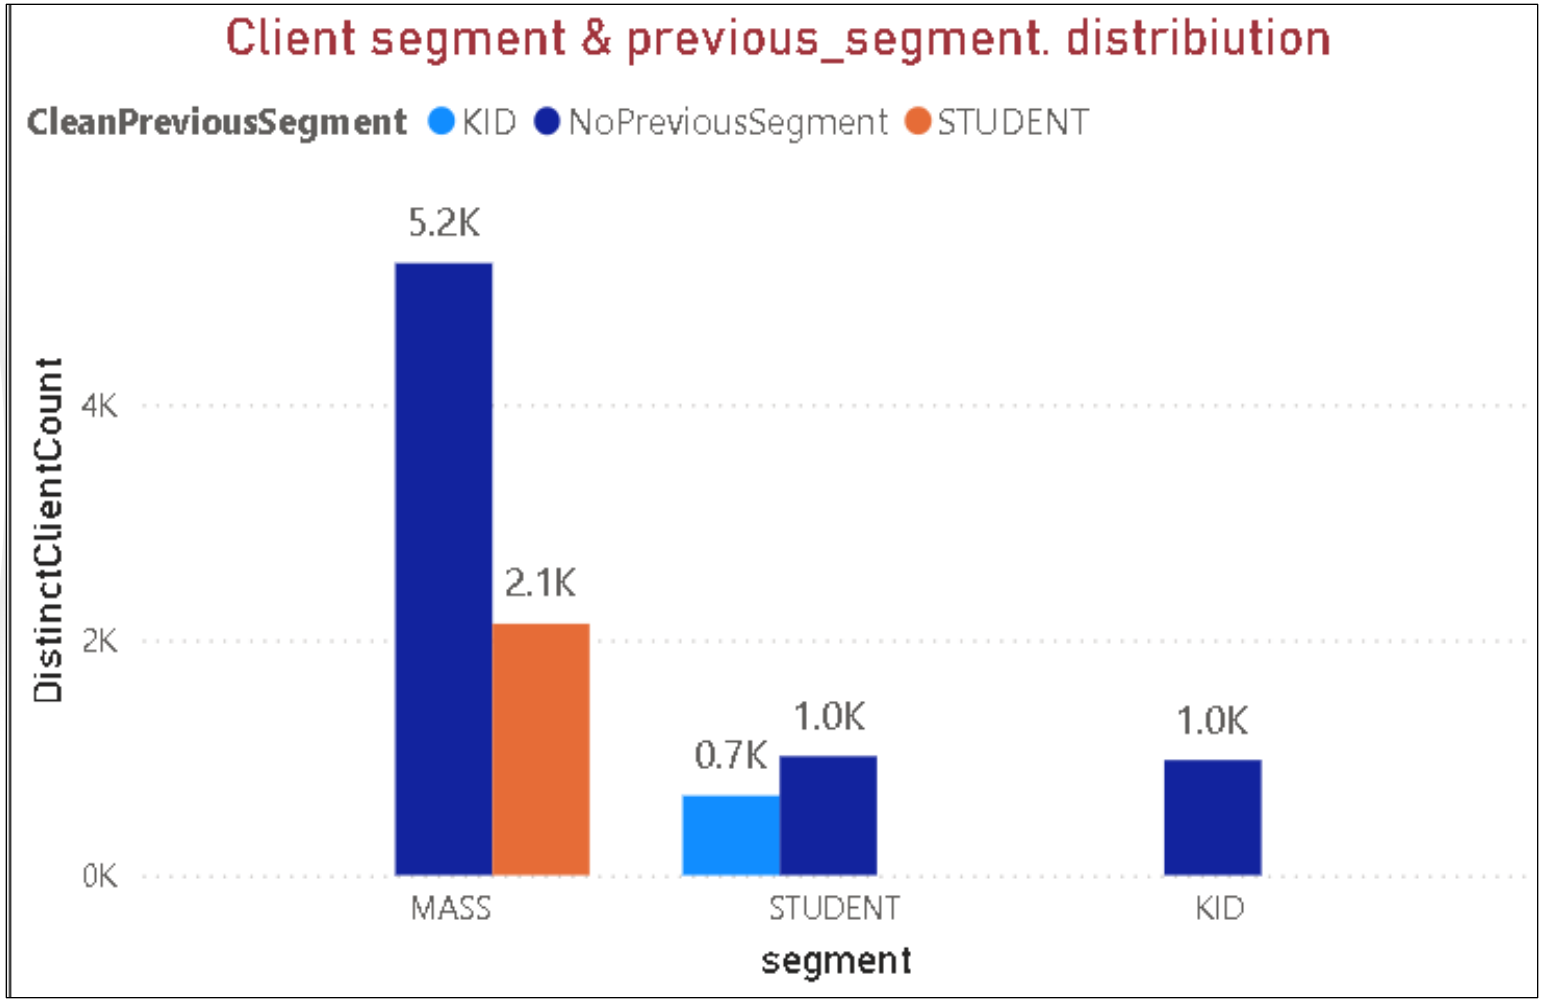
2. Segmentation Dynamics

Overall Segmentation with Client Movement

- **MASS**: **7.3K** clients (the largest segment)
- **STUDENT**: **1.7K**
- **KID: 1K (**the smallest segment)

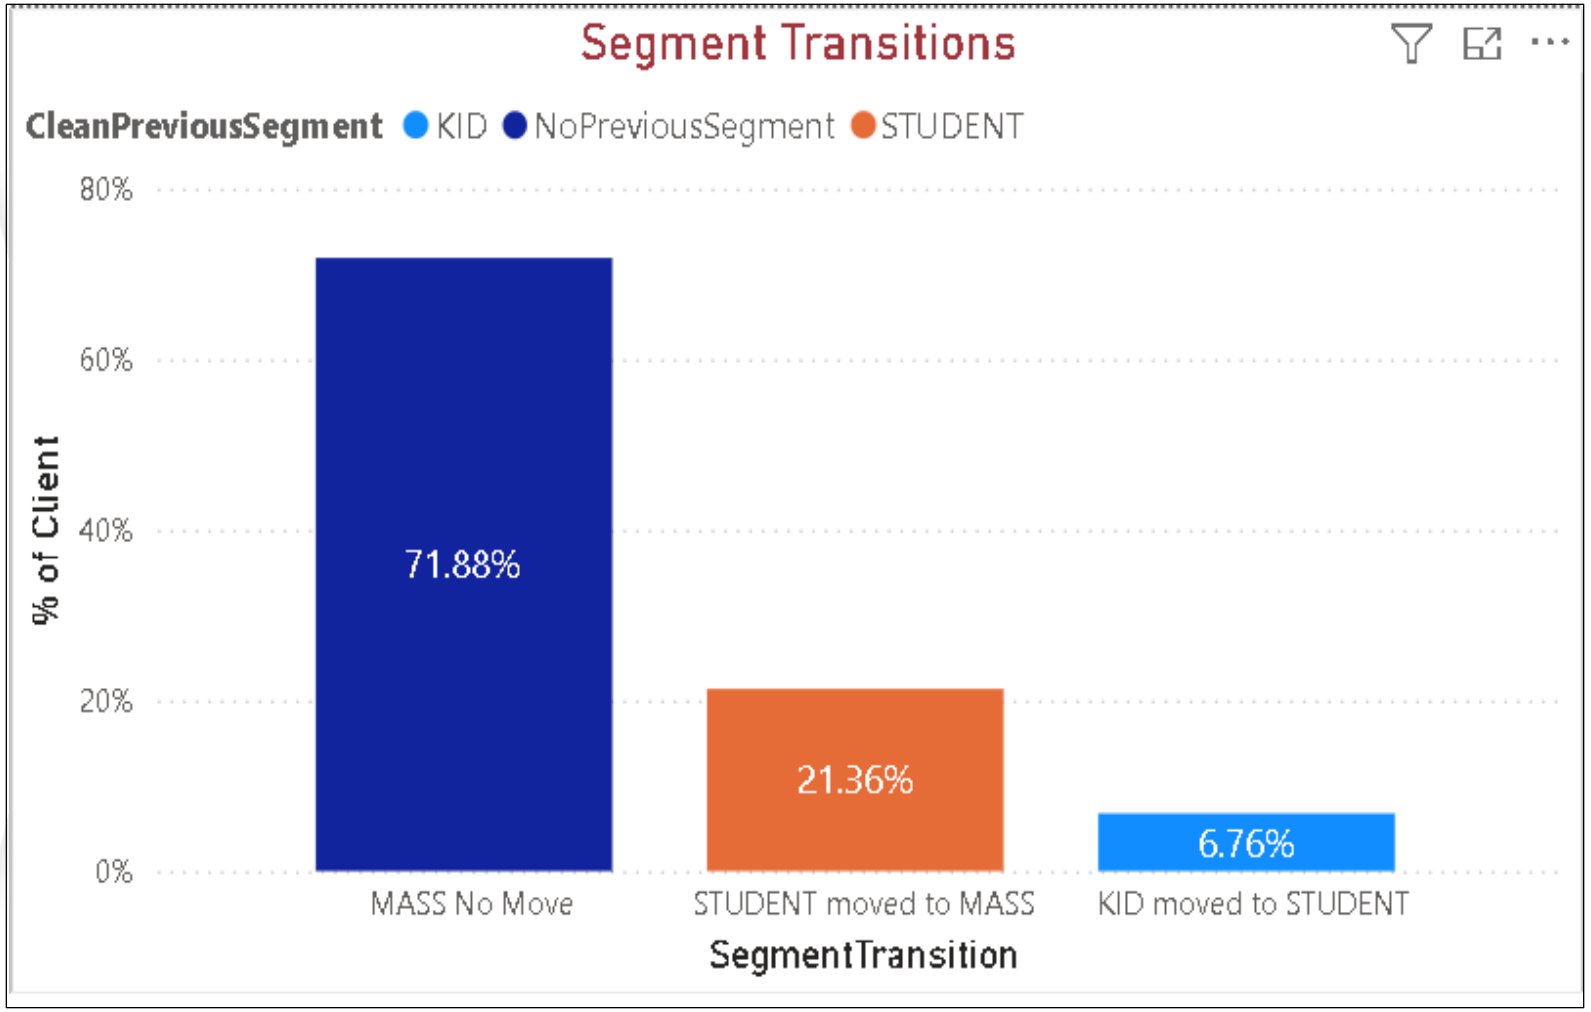
Segment Switches

- **0.7K** moved from **KID** to **STUDENT**
- **2.1K** moved from **STUDENT** to **MASS**



Client Percentage by Segment

- The **MASS** segment represents **72%** of the **client base**, making it the **primary revenue driver.**
- Formerly **STUDENT:** 21.36%
- Formerly **KID:** 6.76%

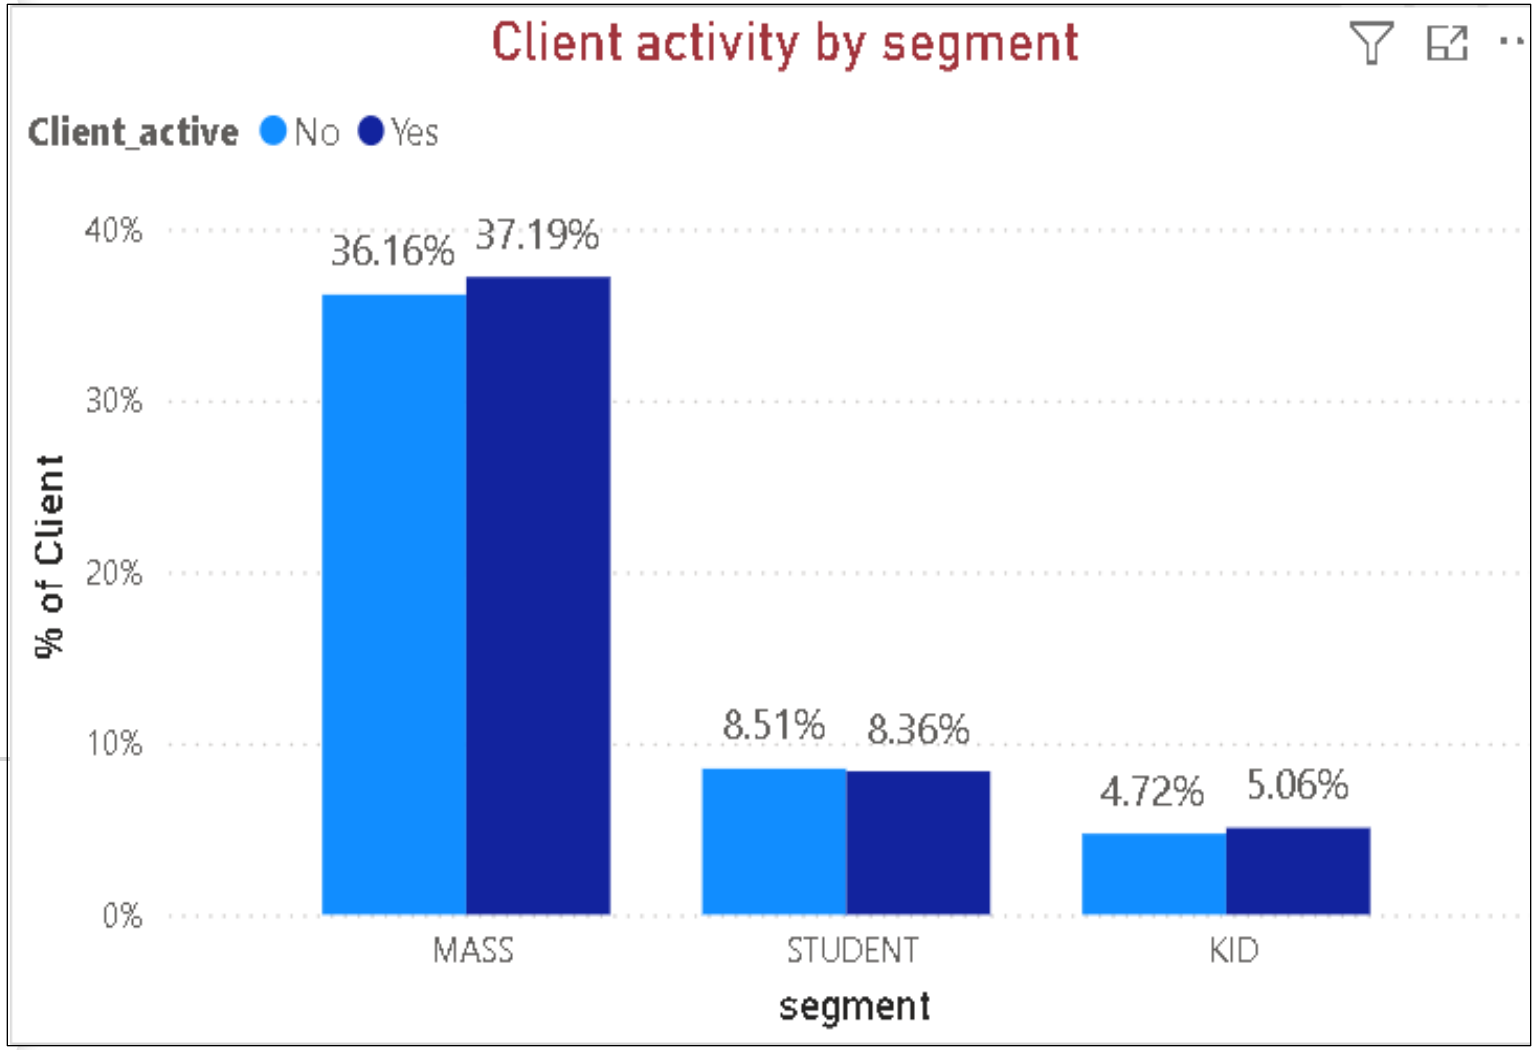


Client Activity by Segment

➤ However, activity levels are nearly evenly split (**50% active vs inactive**). This highlights a significant opportunity to improve engagement within the largest and most valuable segment.

➤ **MASS**: **37.19% active** vs. **36.16% inactive.**

➤ **STUDENT** and **KID**: similar active/inactive distribution.



Strategic Recommendations (Segmentation)

Retention focus – Segmentation is age-driven, with **50:50** activity split.

Personalization – Tailor strategies for each segment based on account/currency behavior.

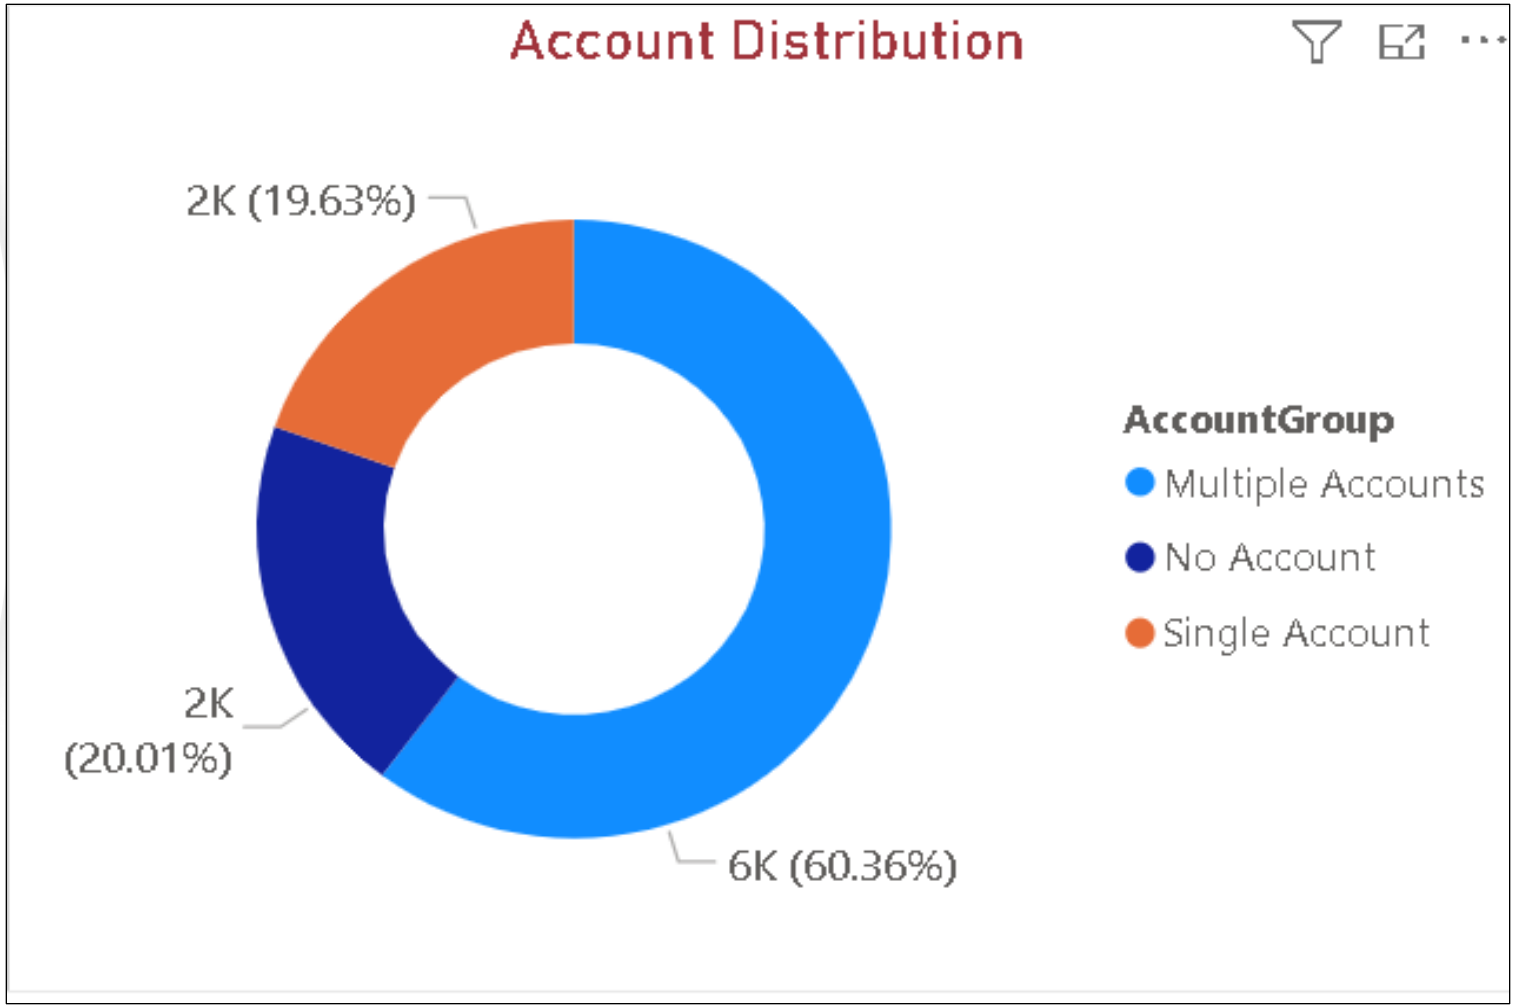
3. Account and Currency Profile

Account Distribution

➤ **19.63%** of clients have one account.

➤ **60.36%** have multiple accounts → strong multi-product orientation.

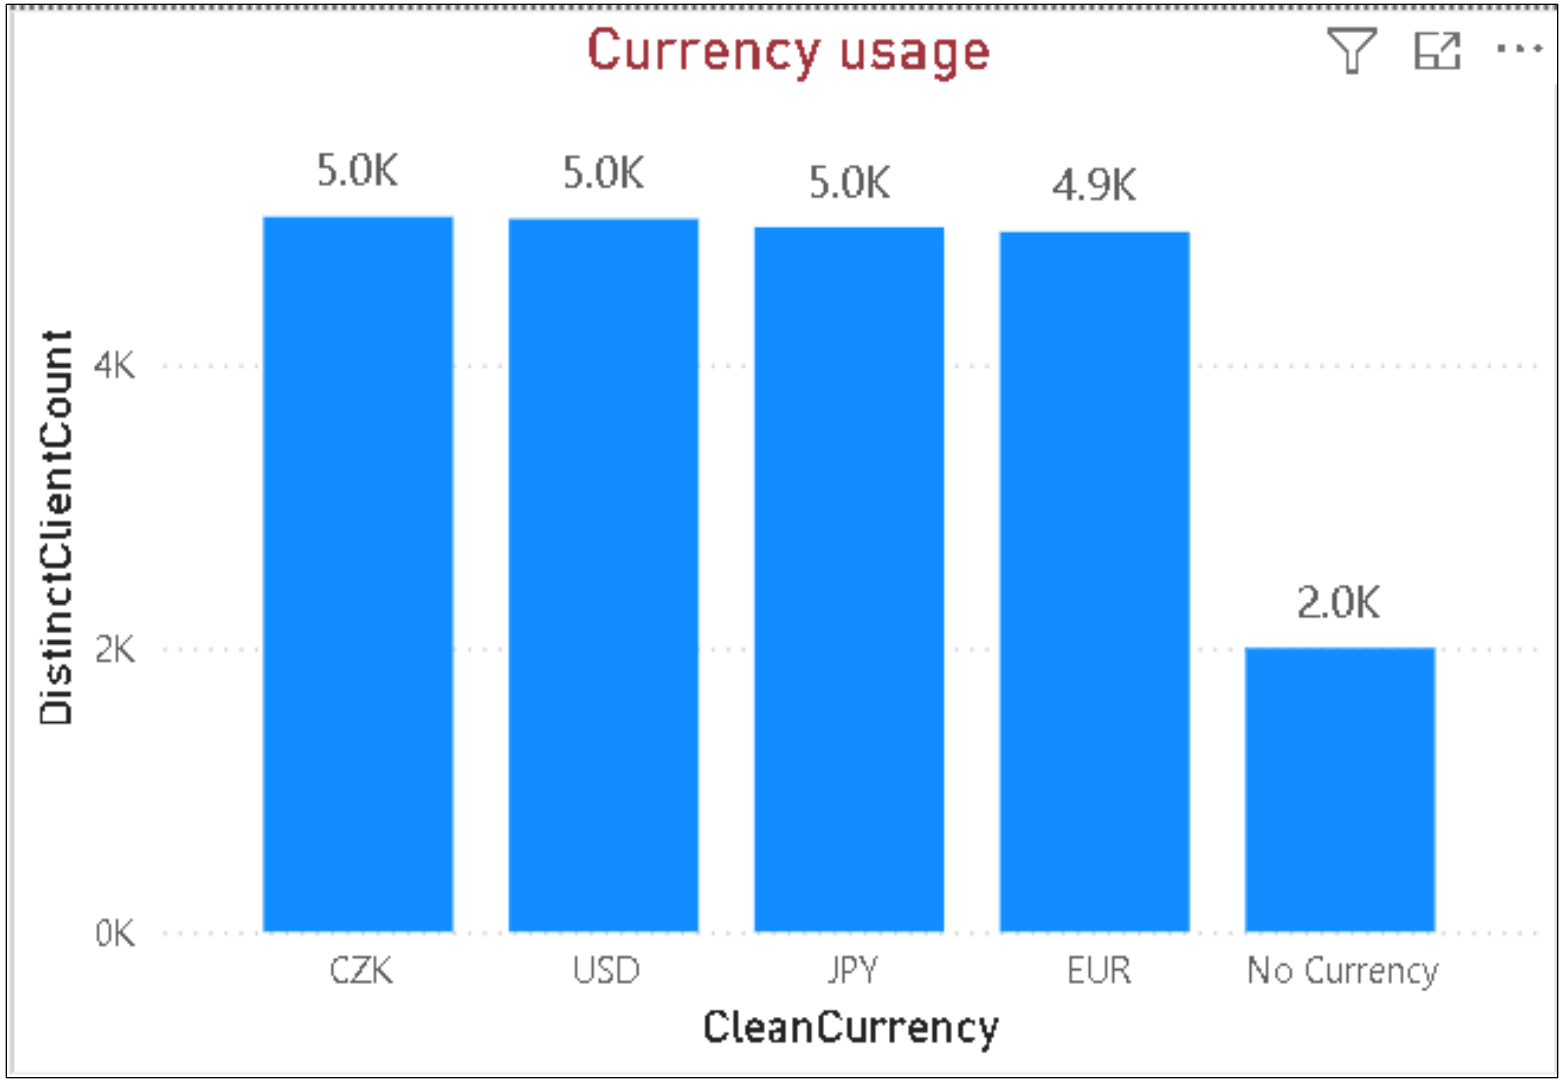
➤**2K** clients have no account (only mortgages).



Client Currencies

➤ Most used currencies are: **CZK, USD, JPY, EUR.**

➤ **2K clients** have **no currency** or **account data** → **only mortgages.**



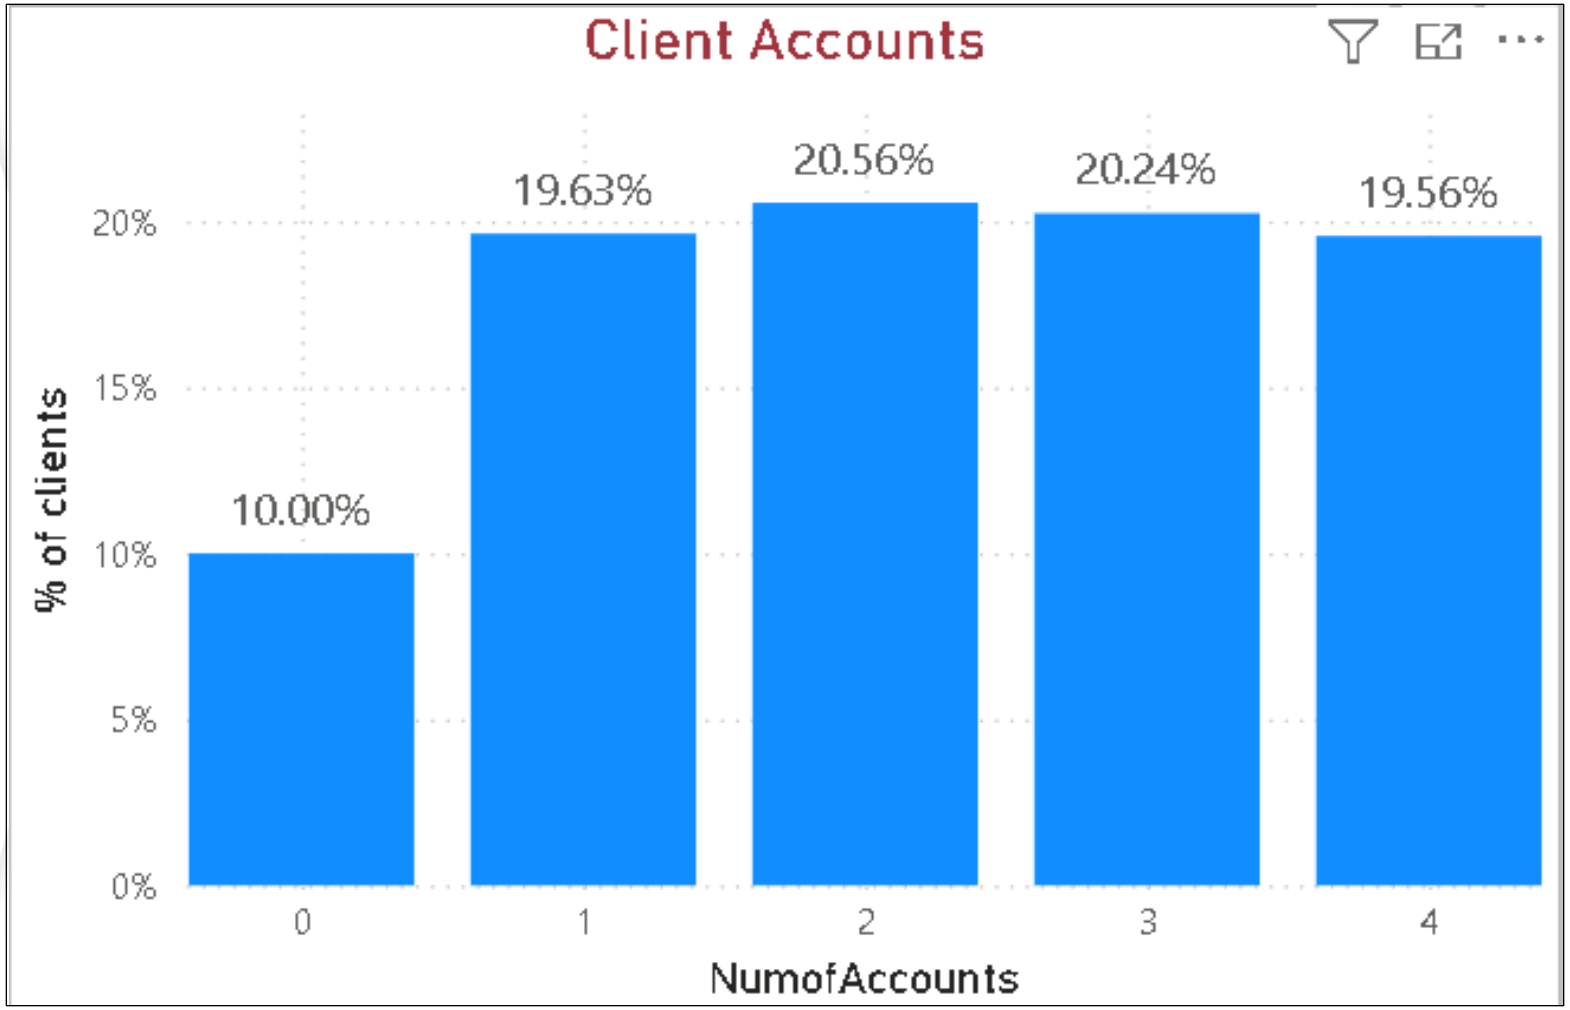
Client Accounts

➤ **Over 60%** of clients hold **multiple accounts**, indicating successful **cross-selling.** However, **this does not** translate into **higher engagement.**

➤**Engagement-driven incentives should be introduced** (e.g. transaction-based rewards).

➤**Targeted offers** should be developed **for multi-currency users.**

➤**10%** of **clients** have **no account** and only hold a **mortgage**.



Accounts and Activity

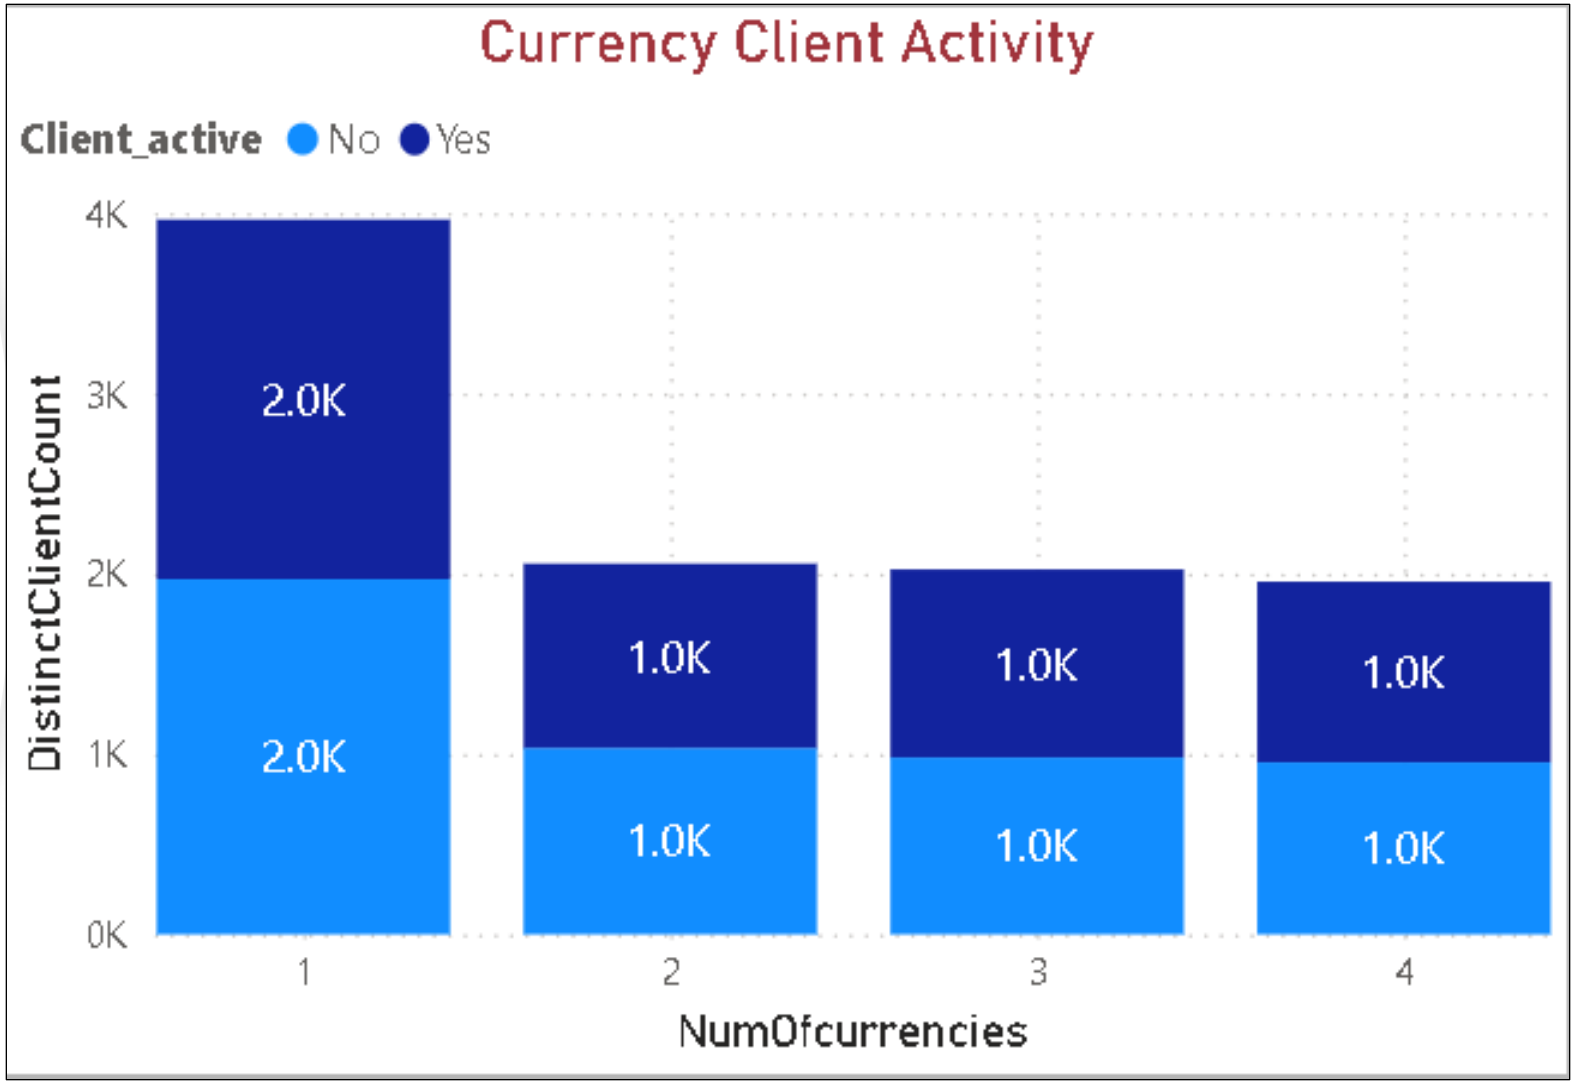
➤ **Activity** remains **constant** (**50%**) regardless of account count, suggesting that **increasing product ownership** alone **does not drive engagement**.

This highlights a **gap between** product **adoption** and actual usage.

➤ Clients with **multiple accounts** show the same activity:

- **2.0K** active
- **2.0K** inactive

➤Same trend across clients with **2, 3,** and **4** accounts.



Strategic Recommendations (Accounts & Currencies)

Cross-sell potential – Motivate clients to open more accounts or add currencies.

International client targeting – Offer investment or travel packages to **CZK/USD** users.

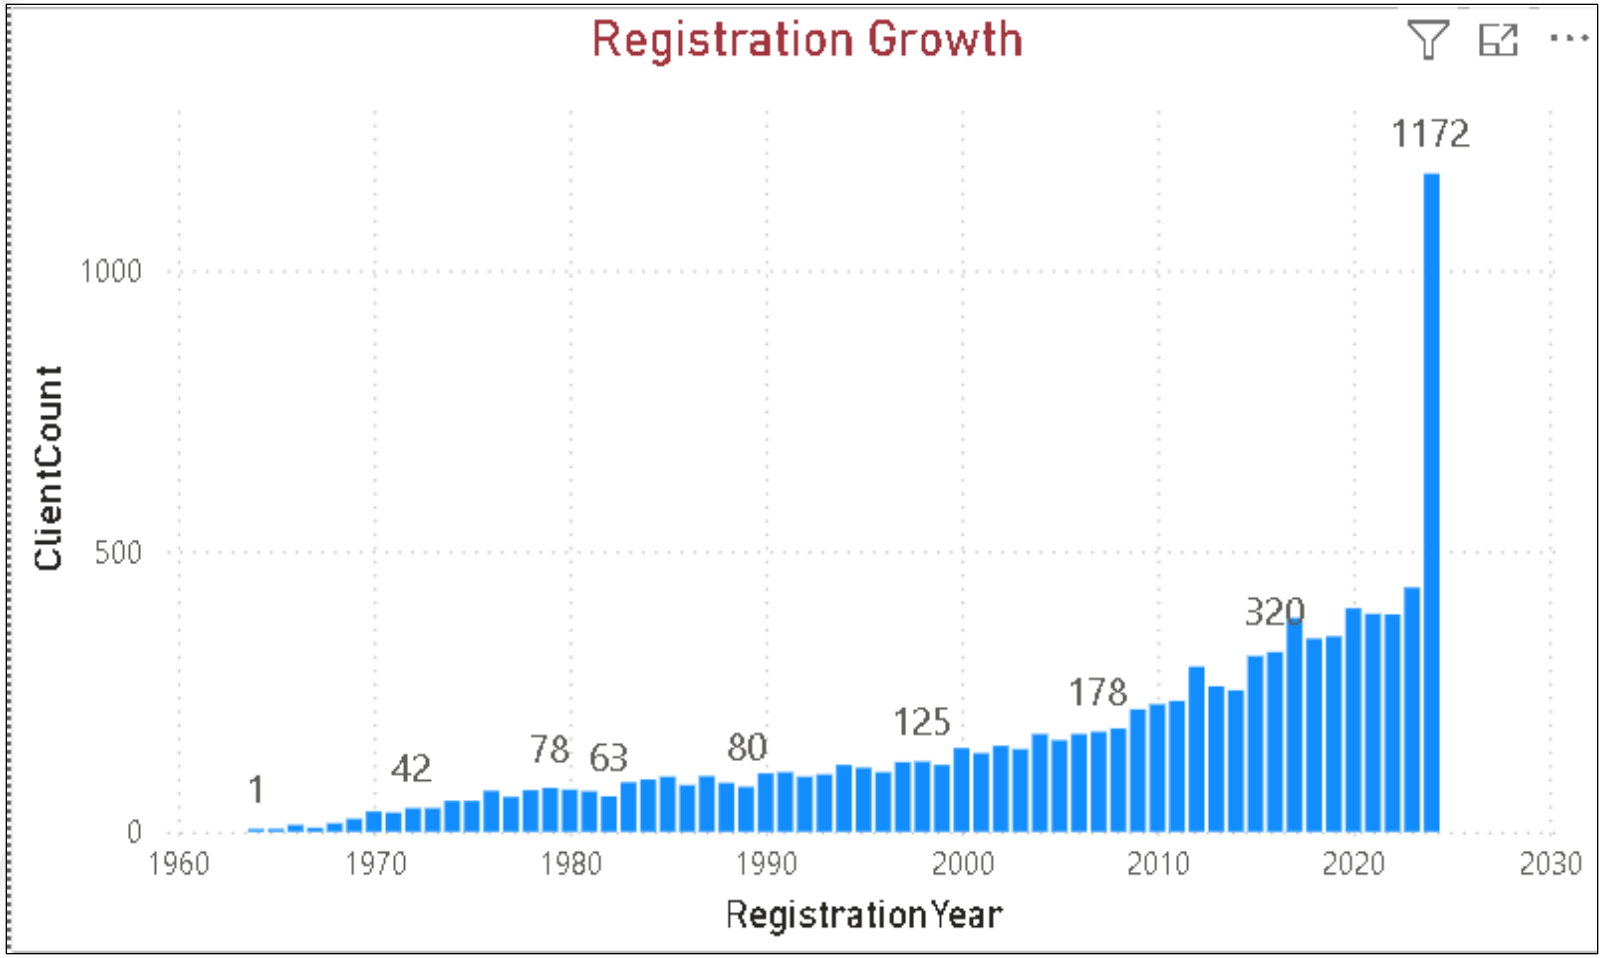
Loyalty programs – Use account count and currency diversity for loyalty strategies.

4. Client Lifecycle /Registration Trends

- **Registration Growth**

➤ A significant **spike** in registrations in **2024** suggests **successful acquisition campaigns**.

➤ Further **cohort analysis** is recommended to evaluate long-term retention and lifetime value.

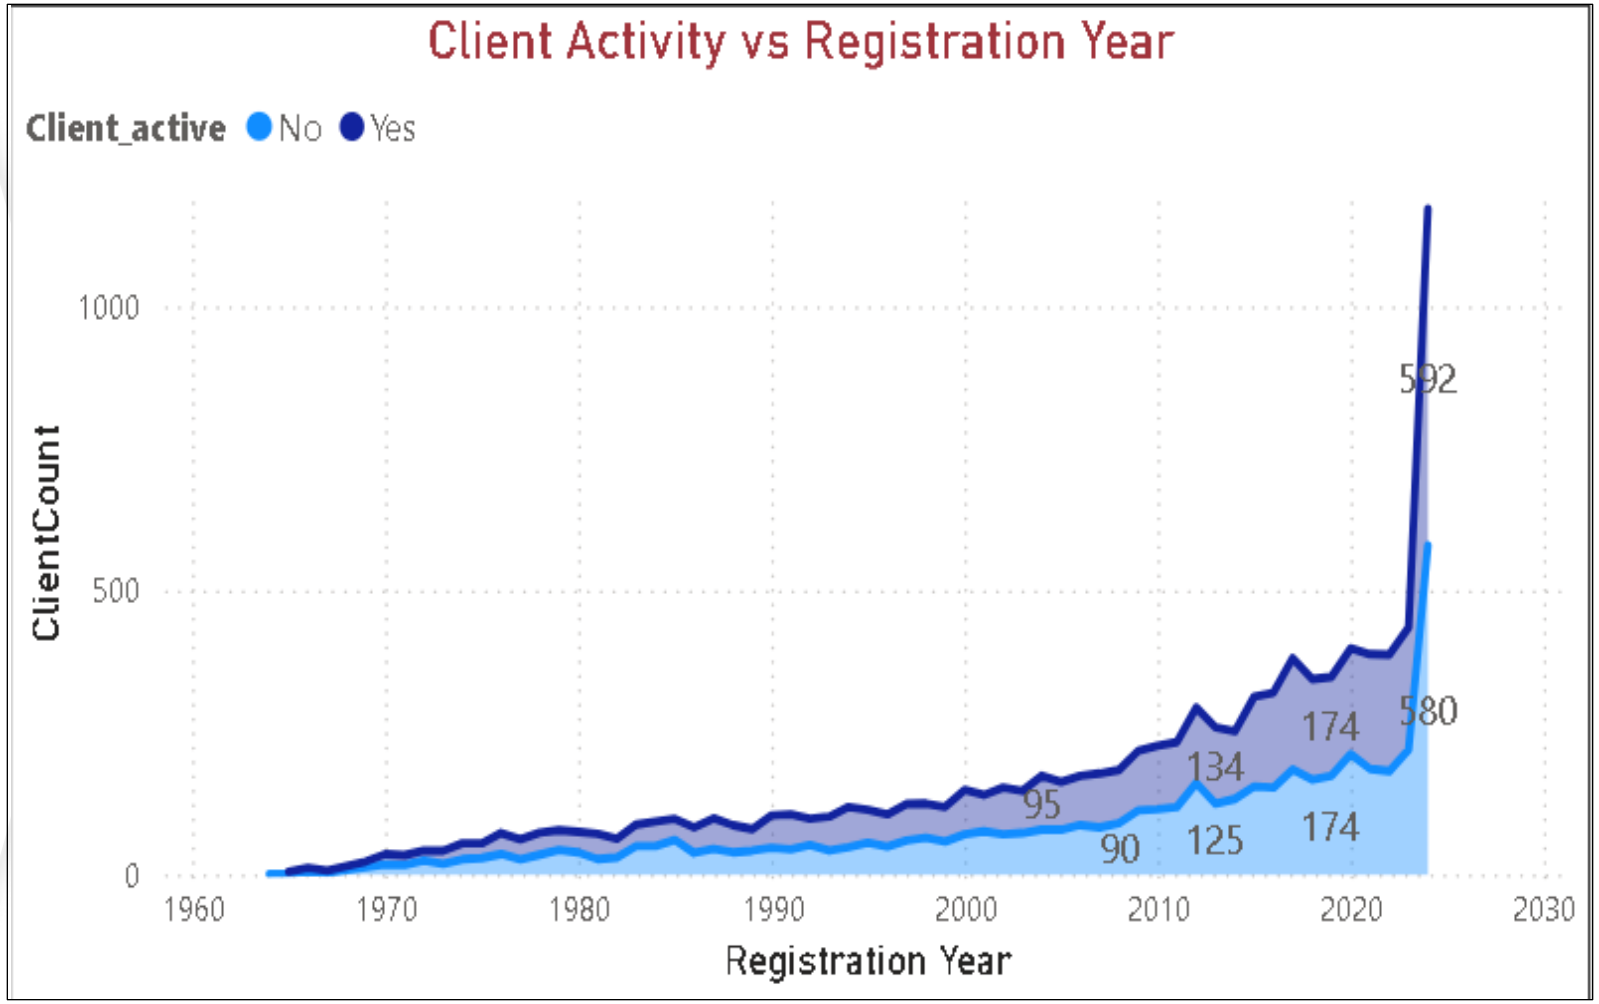


Activity by Registration Year

➤However, **client activation rates remained** stable (**50%) over the years**, indicating that increased acquisition volume **did not negatively impact user quality.**

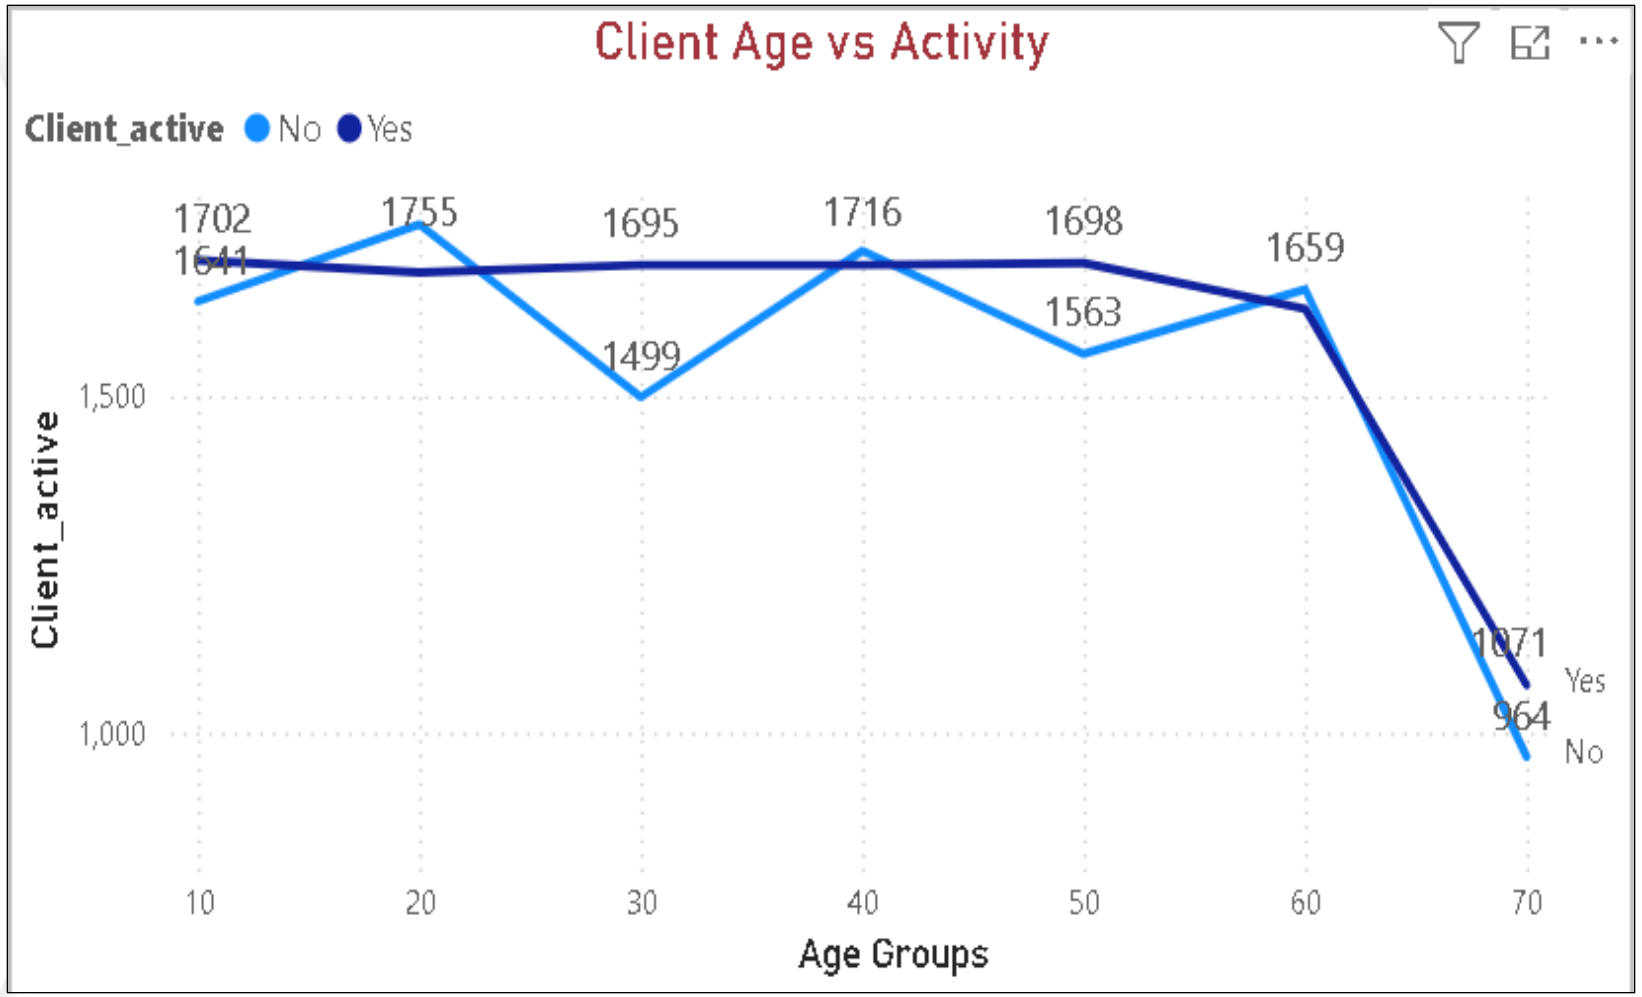
➤**Peak** activity was in **2024** when was **592 Active** and **580 Inactive** clients.

➤ **Further cohort** analysis is recommended to evaluate **long-term retention** and lifetime value.



Age and Activity

- **Most active:**
  - **Age 10**: 1,702 active
  - **Age 50:** 1,698 active
- **Least active:**
  - **Age 70**: 1,071 active



Strategic Recommendations (Lifecycle)

Retention – Focus on older clients while maintaining others.

Acquisition Timing – Repeat successful strategies from peak. periods

Segmented Onboarding – Tailor communication by age and registration year.

5. Strategic Recommendations (Summary)

1. Activate inactive users in the MASS segment. Focus on re-engagement strategies (e.g. targeted offers, usage incentives), as this segment represents the largest revenue opportunity with low acquisition cost.

2. Shift from cross-sell to engagement strategies. Since multiple accounts do not increase activity, introduce usage-based incentives rather than additional product offerings.

3. Target high-value behavioral segments. Prioritize clients with multiple currencies, as they likely represent internationally active or higher-value users.

4. Improve onboarding for new users. Given stable activation rates (50%), optimizing onboarding flows could significantly increase overall engagement without additional acquisition spend.

Client without accounts (mortgages only)

Out of **10K** clients:

- **1,000** have **cnt_of_ca = 0**
- **1,001** have null or missing **cnt_of_ca**

Total **2,001** clients lack **account/currency data** → those clients have only mortgages.

Description of Source CSV Table Columns

Column Name	Meaning
client_id	Unique client ID
first_name	First name
gender	Gender (M / F)
birth_date	Date of birth (used to calculate age)
city	City of residence
zip_code	ZIP code (postal code)
segment	Current customer segment
previous_segment	Previous segment
registration_date	Date of bank registration
fl_active	Is the client active? (likely 1/0 or yes/no)
cnt_of_ca	Number of accounts
ccy_of_acc	Account currencies (e.g. EUR/USD), separated by slash "/"

6. Conclusion and Next Steps

Key Findings

The **MASS** segment **dominates** the client base **(~72%)** but shows **only ~ 50% activity** → indicating significant untapped **engagement potential**.

Increasing product ownership does not improve engagement → clear gap between adoption and actual usage.

Multi-currency users represent a **high-value segment** with strong monetization potential.

Acquisition is effective, but **activation remains constant** → **onboarding inefficiencies.**

Recommended Actions

Focus on **re-engaging inactive users**, especially within the **MASS** segment.

Shift from **product-driven to engagement-driven strategies.**

Prioritize **high-value behavioral segments** (e.g. multi-currency users).

Improve **onboarding and early user experience** to increase activation rates.
